

CommunicAsia, Singapore June 16, 2008 –

**At the Expo CommunicAsia 2008, VigSys will launch its brand new addition to its family of mobile broadband connection devices, VigSys VD30 Wireless Docking Gateway.**

VigSys Sdn Bhd (“VigSys”), an emerging data mobility solutions manufacturer in Malaysia; today unveiled VigSys Wireless Docking Gateway model VD30. The product has been designed to address increasing needs of connection sharing especially for users already owning a USB HSxPA Modem from other manufacturers.

VigSys VD30 is designed with “Just Dock-It” concept for ease of use in mind. It is a HSxPA USB Modem docking station and converts the modem into a full featured WIFI Router allowing sharing of the high speed wireless broadband access amongst small group of users. To get connected and start sharing the connection, user requires only one time simple setup on VD30 before docking the USB modem. The VD30 supports both wireless WIFI 802.11b/g and Ethernet 10/100Mbps connections. VigSys VD30 comes in 5 striking colors to suit different user preference. Using the low cost VD30 with an existing USB modem saves money for users.

Apart from VigSys VD30, other VigSys data mobility products like VM10 USB Data Gateway and VR20 Wireless Data Gateway which were launched at the CeBIT 2008 will also be showcased at the CommunicAsia 2008. All products allow travelers to access to wireless broadband virtually on any worldwide HSDPA, UMTS, EDGE and GPRS networks.

The VigSys products are currently available in Malaysia, Singapore and throughout VigSys’ worldwide distribution networks.
